DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?

A lot of my previous abstractions could easily be encapsulated in a factory function with little adjustment.

_____

2. What parts of encapsulating your logic were hard?

After becoming comfortable writing code with a functional approach from the start, it took me a while to adapt to an object-oriented approach.

_____

3. Is abstracting the book preview a good or bad idea? Why?

Book connect as it is remains simple enough to not warrant too much abstraction, however, abstraction and encapsulation definitely makes the code a lot more scalable and maintainable.
